WHY IT IS THE TREASURE STATE

By George S. Clason

To think of Montana as a wild west state, a land of cowboys, stage coaches and Indians, is a misconception. It is mostly undeveloped, to be sure, but those portions that are developed are up to date in every particular. Montana is a land of bath tubs, electric lights, automobiles and modern machinery.

Since its earliest discovery, Montana has been a land of superlatives. It is a state of vast extent, with a wonderful wealth of natural resources.

Montana is called the Treasure State because it always has been and always will be a source of great wealth. The first white men to come found riches awaiting them, and new sources of wealth have been developing ever since. In that future that glows so brightly ahead, are many sources of wealth for the present citizens, as well as for all others who wish to cast their lots with the Treasure State.

TREASURES OF FURS

Montana was once the hub and center of the American fur trade. The trapping of the multitude of furry denizens of the mountains and forests was the first commercial enterprise in the state. More pelts were secured here and more forts and fur trading posts established than in any other state. It was a treasure field for the early trappers.

TREASURES OF GOLD

During Civil War times placer gold was discovered in Montana, just as it was in California a decade before. The excitement was nation-wide and a great rush of gold seekers headed for the new diggings at

Take a GREEN GUIDE with you, and you never will go wrong

Rainbow Falls of the Missouri, Near Great Falls

Bannack. Later finds at Alder Gulch, Last Chance Gulch and Confederate Gulch increased the excitement. Two hundred million dollars in gold nuggets was washed from these gulches in a few years, and the prospectors fondly called Montana the Treasure State.

TREASURES OF THE GREAT PLAINS

On those vast plains of eastern Montana, with their rich growth of highly nutritive grasses, the herds of cattle succeeded the buffalo. Here nature was also lavish, the herds multiplied, the owners grew wealthy and literally owned the cattle on "a thousand hills." Montana became one of the country's greatest stock raising districts and a Treasure State for the stockman.

TREASURES OF THE COPPER MINES

The development of the copper mines of Butte opened a new era in copper production in this country. Here was a volume of copper unparalleled in the history of the industry. The development of electricity brought an unprecedented demand for the red metal and Montana alone had the production to supply it. Immense fortunes were made in a very few years by Marcus Daly, Haggin, Clark and others. The smelters of the Anaconda Copper Company at Anaconda and Great Falls are among the largest of their kind. Montana was, and still will be for years to come, a Treasure State for the miner.

TREASURES OF THE FORESTS

Among the first industries of Montana was lumbering. The vast forests offered an attractive and profitable field. There are today, after sixty years of continuous cutting, fifteen thousand men employed in lumbering. This will give some idea of the extent of the timber in the State of

Montana. The annual production of merchantable timber is four hundred million board feet. There are still standing in the forests forty-eight billion board feet. More than half of the standing timber is within the National Forests. This guarantees the continuance of this source of wealth and not its elimination.

Montana's natural wealth of pine and spruce has made it a Treasure State for the lumberman.

MONTANA'S GREATEST TREASURES

Rich as the mines of Montana are acknowledged to be, and vast as are her timber resources, the annual output of her hundred thousand farms is already worth more than all her other products combined. When all of the state's agricultural lands are settled, the annual total value of farm products will be more than the total value of the annual production of all of the gold, silver, copper, lead and zinc mines of the entire world.

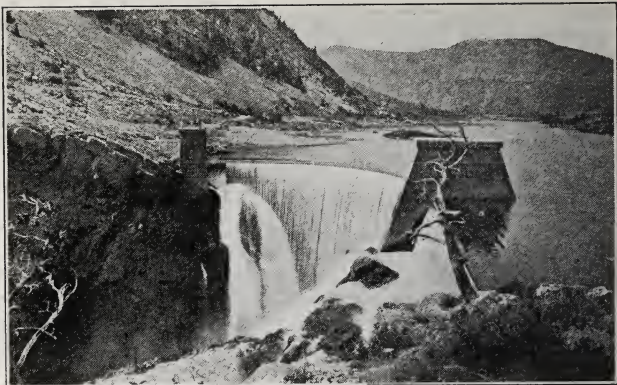

Even now, with four-fifths of her agricultural lands undeveloped, Montana is one of the great farming states and a leader in the quality of farm products. Montana grains and Montana apples are prize winners in all the great land shows. At the Panama-Pacific International Exposition at San Francisco, Montana carried away the first prizes for the finest apples and wheat in competition with the whole world. Since then many more prizes have been won under the closest competition with our best agricultural states.

MONTANA'S SOIL DELIVERS WHAT THE FARMER WANTS

Statistics for ten years show remarkably high averages for crop production per acre. These figures, which are for the entire state, the poorest part as well as the

Irrigated Alfalfa, Second Crop, and More to Come

Sun River Diversion Dam of the U. S. Reclamation Service

best, speak for themselves and are as follows: Oats, 44.63 bushels per acre; barley, 34.61; wheat, 25.85; rye, 22.25; potatoes, 149.40; sugar beets, 15 tons.

JOIN THE EMPIRE BUILDERS

Montana has 2,500,000 acres of irrigated land, and engineers claim that fully 5,000,000 more can successfully be irrigated from the available water supply. Out of a grand total of 30,000,000 acres of land suitable for farming only 6,000,000 is now actually cultivated.

With such enormous areas of available land, with a soil which competition has demonstrated can beat the world in production, with local markets calling for much more farm and dairy products than are now produced, Montana invites every man who believes in the wealth-producing efficiency of the plow, the reaper and the dairy cow, to come.

Montana invites new settlers to share the opportunities and prosperity that her farmer citizens are now enjoying. For each farmer now here there is ample room for ten more to secure plenty of good land at a price so low that but a few crops will pay its entire cost.

HORTICULTURE AND THE BIG RED APPLE

The broad, mountain-sheltered valleys of western Montana, with a climate so mild a man can wear his summer underwear the year round, are ideal for the raising of apples and other fruits. The Bitter Root Valley, one hundred miles long, is one of the nation's famous apple districts.

The fruit district extends to the Missoula and Flathead valleys; also to portions of Carbon, Sanders, Jefferson and Yellowstone counties, and, to a more limited extent, to other parts of the state. Apples are first in importance, then cherries, with some pears, peaches, plums, prunes, grapes and berries. All Montana fruit, if properly tended, is of that wonderful quality peculiar to Montana.

EASTERN MONTANA, FAVORITE PASTURES OF THE BUFFALO

In topography eastern Montana is very distinct from the rest of the state. It is classed as the plains section, and is a part of the great plains of the United States, which extend over Kansas, Nebraska and the Dakotas. This area has a generally rolling surface, broken at intervals by tree-fringed creeks and rivers and by occasional low hills or "buttes."

Before the days of the white man it was an unbroken expanse of rich, nutritious prairie grass, and was the favorite pasture ground for great herds of buffalo. Even ten or fifteen years ago its prairies were hardly disturbed. Today it is dotted with homesteads and broken up into many fields of wheat, flax and other crops. Where the prairie sod is still unturned the settlers' horses and cattle now range and fatten upon the native grasses.

Eastern Montana includes the great spring wheat and flax-growing area of the state. In fact, 60 per cent of the spring wheat and 90 per cent of the flax grown in Montana are grown here. These crops have proved so generally profitable that they have hindered the establishment of more permanent general farming. The chief corn-producing counties also lie within this section.

Montana Apples Are Big and Sound, Without a Worm

Oats, Shoulder High, as They Grow in Western Montana

CENTRAL MONTANA, THE GREAT GRAIN DISTRICT

The central part of Montana includes some of the most productive areas of the Northwest. Here we find soil and climate favorable to the profitable production of a wide range of agricultural products. Winter wheat, spring wheat, oats, barley, sugar beets, peas, corn, alfalfa, clover grasses, livestock and a variety of fruits of surpassing quality are generally grown. In this great area there are still millions of acres of excellent agricultural land which may be purchased at a comparatively low figure. Thousands of farmers may establish and maintain comfortable homes in this central part of the "Treasure State."

FERTILE MOUNTAIN VALLEYS OF WESTERN MONTANA

West of the main chain of the Rockies and reaching to the crest of the Bitter Root Mountains is western Montana. The main chain of the Rockies may be defined as extending from the northern boundary line of the state southward through Helena and Butte. This part of the state is a small empire in itself—250 miles long and 50 to 100 miles wide. It is made up of rich mountain valleys, watered by great rivers and including great areas of national forests. The soil is most productive, fuel is abundant, the climate is mild and delightful, and the scenery generally throughout the section makes it most attractive.

The elevation varies from 1,800 to 2,000 feet in western Lincoln and Sanders counties to 5,100 in Granite County. The principal crops include oats and hay in the higher altitudes and wheat, peas, corn, potatoes and fruits in the lower valleys. Livestock raising is profitable generally throughout this section. Alfalfa is a profitable crop in nearly all the counties. Sugar beets are grown in the

Missoula territory and large crops of potatoes are raised in the Bitter Root Valley.

Western Montana is the oldest farming section of the state, and the principal fruit raising district.

ONE OF THE GREATEST STOCK RAISING STATES

With great areas of grazing land in prairies, foothills and forests, the state will always stand as one of the great livestock regions of the world. Since the time of the great cattle ranches, when the vast herds that roamed the plains were rounded up each fall and shipped to market in the East, to the present time when stock raising on the smaller farms is the rule, Montana has always been one of the leading livestock states.

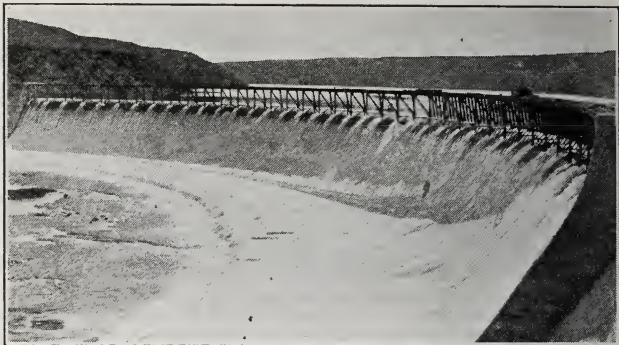

No more remarkable change has taken place in any industry than that in livestock. For many years the exclusive occupation of the bonanza stockman on the large ranch, running thousands of cattle on the open range, it has now become the enterprise of the small stockman-farmer, with well-kept herds of high-grade stock. While there are still some large ranches and some open range, the coming of the homesteader and settler has done away with the great ranches, the cowboys, the roundups and the big stockmen of a few years ago.

DAIRYING NO LONGER AN INFANT INDUSTRY

Dairying in Montana is developing rapidly. Natural conditions favor it and, with good markets always at hand, the industry is a marked success. The present state of development is shown by the fact that there are 197,000 dairy cows in Montana and sixty-six creameries and eight cheese factories. This number has grown in five years from 104,000 cows and twenty-five creameries. Many of these have been enlarged and are handling a much larger

Thirty-seven Thousand Sheep in One Flock, in Meagher County

Dam of the Montana Power Co. Across the Missouri River

volume of business than five years ago. Besides the creameries and cheese factories, there are many dairies near the cities, with a greatly increased milk supply and an ever increasing number of cows to supply the added demand.

UNVARNISHED TRUTH ABOUT CLIMATE

Climatic conditions in Montana have been as little understood as have the agricultural possibilities. Like all sections of the country, the state at times has extremes of temperature, but it must be remembered that Montana is a region of magnificent distances and of great variation in temperature and precipitation. As in any extreme northern state, the thermometer occasionally records a low midwinter temperature, but the cold spells are short. The ordinary outdoor occupations may be carried on in winter with little inconvenience. The summer temperatures never are oppressive and heat prostrations are unknown. In the mountains the summer climate is delightful.

Precipitation comes generally during the growing season, when it is most needed. Precipitation outside of the mountains is lightest during the winter months and snow-fall is therefore generally light.

CHEAP ELECTRIC POWER FROM MONTANA'S STREAMS

Conservative authorities estimate that 1,000,000 horsepower in electrical energy can be developed from Montana streams.

At Great Falls the Missouri River drops 400 feet in a distance of eight miles. This is the greatest natural power

site, but there are many others. Already the Montana Power Company has thirteen large plants installed at various points in the state, generating a total of 211,530 kilowatts.

The Butte, Anaconda & Pacific Railway Company has ninety miles of electrically operated tracks. The Chicago, Milwaukee & St. Paul Railway has successfully electrified 440 miles of mountain railroad between Harlowton, Mont., and Avery, Ida.

Electricity from water power is used to operate mines, to light cities and to furnish cheap power for all varieties of city and country use, even to the pumping of water for irrigation projects. A total development of about 300,000 horse-power has already been successfully made.

LIBERAL SCHOOL FACILITIES FOR EVERY CHILD

There are more than 3,000 school houses in Montana. No community is so remote that school facilities are not furnished to the children. There are 165 high schools, backed up with a liberal high school law that builds up better high schools in the smaller towns and strengthens the work in the rural consolidated schools.

At Missoula is located the State University. Here also are five professional schools: law, pharmacy, forestry, journalism and music.

At Bozeman is the College of Agriculture and Mechanical arts, well equipped with experimental farms. Various courses are given, including agriculture, engineering, applied science, household and industrial arts.

At Butte, on the richest mountain of ore in the world, is located the State School of Mines. At Dillon the state maintains the State Normal School for the efficient training of teachers.

MONTANA'S MINERAL DEPOSITS

From early days Montana has been one of the leading states in the production of precious metals. Butte is one of the country's greatest mining camps. The state ranks first in the production of silver and second in copper and zinc.

Veins of lignite coal underlie vast areas in the eastern part of the state. Between fifty and sixty coal mines are in successful operation in widely scattered localities.

Sapphire mining is an important industry also. In the West Fork District of Granite County are the most extensive deposits in the world. The sapphire bearing gravel beds also occur in Fergus, Musselshell and Madison Coun-

Montana Indians Crossing the Little Horn River in Gala Day Attire

ties. One is liable to find the blue pebbles in any stream bed in these localities.

One of the greatest and most valuable of the undeveloped resources of Montana is phosphate, large deposits of which are found in southern Montana. It will be many years before the lands of the state will require the application of a commercial fertilizer, but when that time does come Montana will have the material within its borders.

Montana's total production of precious metals has to date reached the stupendous total of over two billion dollars. Nevertheless, it may be said truthfully that its mineral resources have been but scratched and its wealth in this respect has reached only the initial stage of development.

WHAT OF MONTANA'S OIL AND GAS FIELDS?

Potent with possibilities are the oil formations of Montana. Petroleum engineers of highest standing are investigating carefully the many domes scattered widely over the state that may develop into rich oil fields and make Montana the next big oil-producing state. Formations similar to those of the best oil-producing sections of Wyoming extend continuous in Montana. Gas wells have been found at Havre, Glendive and Baker. Producing wells have recently been brought in in Devils Basin and on the Cat Creek Anticline.

THE REMAINING INDIANS OF MONTANA

The Indians of Montana no longer don the war bonnet and paint except to celebrate with childlike enthusiasm

festal days. The sons of the fierce warriors of other days are now Carlisle educated and live in peace and plenty. One may tour through any part of the state, including the several reservations, without fear of the red man. The Crows and Blackfeet were always friendly to the white man, even during pioneer days. The total Indian population of Montana is about 11,000.

MONTANA'S FREE STATE INFORMATION BUREAU

The Department of Agriculture and Publicity is maintained by the state to furnish reliable information to all who are interested in the settlement or development of the state. Mr. Charles D. Greenfield, the commissioner, with offices in the State Capitol Building at Helena, issues some very attractive literature which he will gladly furnish on request.

WHERE THE OLD WEST IS PASSING

Even in this day, when the pastures of the buffalo have become wheat fields and the cowboy and the Indian are seldom seen outside of the wild west show, there are still wild places in Montana untouched by the onward march of civilization. Here one may still find that border line between the old West and the new. One may still cross over into a wilderness just as it was in frontier days. One may still breathe that atmosphere of romance, adventure and daring that thrills the early history of Montana.

Here one may still find the hunter, the trapper and the prospector living in the great solitudes of mountain woodland. One may find mountain peaks never scaled by the foot of man, lakes on which no boat ever floated and streams never whipped with the fisherman's fly.

MONTANA, THE GREAT PLAYGROUND

The mountainous area of Montana comprises some of the ruggedest divides and grandest scenery to be found in any land—Glacier National Park on the northern boundary and Yellowstone National Park on the southern boundary are not isolated examples of mountain grandeur, but only a part of that glorious mountain-ribbed belt 150 miles wide that extends across the state.

Most of the mountainous areas are unsettled and uninhabited except by the Forest Rangers and the settlers who have their ranches in the valleys. If one would seek solitude it is necessary only to get off the train at any attractive looking mountain station and walk a few miles

**The Great Falls of the Yellowstone River,
Yellowstone National Park**

into the wilderness of hills and valleys that extends in all directions.

South of the Yellowstone River through Carbon, Sweetwater and Park counties is a beautiful mountainous country with high peaks, lakes and streams.

The Kootenai River country in Lincoln County annually attracts thousands of lovers of beautiful scenery and good fishing.

The Blackfoot valley in eastern Missoula and northern Powell counties affords fine fishing and is a great scenic and camping district.

Flathead Lake, with 300 miles of shore line, the largest fresh water lake west of the Great Lakes, offers many allurements. Sturdy lake boats ply back and forth between the towns on its shores.

In the mountains at the head of the Gallatin valley, near Bozeman, is a wonderland of streams and canons. Here will be found a Government Fish Hatchery.

Among the many other points of interest are the Bad Lands along the Missouri River, near Culbertson; State Fish Hatcheries at Somers and Georgetown Lake; the falls of the Missouri River at Great Falls; the canon of the Missouri River in Lewis and Clark Counties; Thompson Falls; the various Indian Reservations; the copper mines of Butte; the great smelters at Great Falls, Anaconda and East Helena; and the State Fair at Helena.

Montana's mountainous areas have a delightful summer climate. Days are generally sunny, but not hot, while the nights are always cool and pleasant.

LAND OF THE BIG GAME

Big game will be found generally throughout the mountains of the state, including moose, elk, deer, mountain sheep, mountain goats, mountain lions, bear, lynx, wolf, coyotes and fur-bearing animals. Bear and elk are more common in the vicinity of Yellowstone Park.

Those who like bird shooting can find grouse, prairie chickens, pheasants, sage hens, fool hens and duck.

As game and fish laws are constantly being changed, a copy of the laws should be secured from the State Fish and Game Commissioner at Helena, in order that provisions concerning closed seasons, protected animals, game preserves and license fees may be complied with. The cost of non-resident licenses is: Fishing, \$3; fishing and small game, \$15; hunting and fishing, including big game, \$50.

WHERE TROUT AND GRAYLING STRIKE THE FLY

Native to the eastern side of the Continental Divide are found millions of toothsome grayling, beautiful game fish, peacocks of the streams, native only to Montana, Michigan and Alaska.

Trout will be found plentiful in most of the mountain streams and rivers. Perhaps the best trout streams are the following: The Big Boulder of Sweetgrass County, the Upper Yellowstone, the Gallatin and its tributaries, the Madison, the Red Rock River and Lakes, the Big Hole River, Silver and Georgetown Lakes, Flint Creek, Rock Creek, Big Blackfoot River, Clarks Fork, Stillwater River in Flathead County, the Big River, the Kootenai, the Yakt, the Swan and the lakes of Lincoln and Flathead counties.

Four fish hatcheries maintained by the state keep the streams constantly well stocked.

THRILLING SIGHTS OF GLACIER NATIONAL PARK

A glacier is an awesome thing, a great ice flow sliding down a mountain side, a few feet a year, being replenished at the top as it melts or breaks over some precipice at the bottom. Sometimes it is thousands of years on its journey. A slow life and a long one is its history. There are sixty of these slow-moving monsters in Glacier National Park, and after seeing what these are doing, one may understand what glacial action has done to the earth's surface in countless localities during bygone ages.

But the glaciers are only a part of the attractions here. The park consists of 1,500 square miles straddling the top of the Continental Divide and including mountains and valleys of the wildest grandeur. There are many beauti-

Upper Geyser Basin of Yellowstone National Park

ful lakes and streams, meadows of brilliant mountain flowers, bordered with native timber.

Here may be seen the Blackfoot Indians, who add a touch of Americanism to the Alpine atmosphere. Here also live elk, moose, deer, antelope, buffalo, bear, bighorn sheep, and long-horned mountain goats.

The park may be entered by auto from both the east and west sides, but inside the roads are mostly horseback trails. Boats ply upon numerous long streamlike lakes.

A chain of large artistic hotels takes good care of the visitor and adds materially to the pleasure of seeing the park. Several days or weeks can well be spent here.

YELLOWSTONE NATIONAL PARK, WONDERLAND OF THE WORLD

While only a portion of Yellowstone is within the boundaries of the State of Montana, this portion includes the Gardner or main entrance.

The Yellowstone National Park is one of the greatest wonders of the world. It is so large and contains so much that is beautiful and so much that is phenomenal that it must always stand as our greatest national park. Here are more spouting geysers than can be found in all the rest of the world together. Some of these spout boiling mineral water to a height of over two hundred feet. There are also innumerable hot springs, the steam from whose boiling water floats up to join the clouds.

Here is wonderful mountain scenery, beautiful peaks and canons fantastically painted by nature in rich yellows, reds and pastel tints. Down one of these rocky

canons rushes the Yellowstone River and plunges over two giant falls.

Here are petrified forests with tree trunks of solid stone standing in natural positions.

Here is the government's greatest game preserve, with large herds of buffalo, elk, antelope and deer living free from fear of man in natural surroundings. Great bears haunt the tourist hotels and beg for food. Then there is beautiful Yellowstone Lake and innumerable streams alive with hungry trout waiting to make the fisherman happy.

There are in Yellowstone Park fine hotels and motorist camps and hundreds of miles of well-kept macadamized roads. This park is named after the river which the Indians called Yellowstone from the gorgeously colored walls of its great canon.

THE LEWIS AND CLARK CAVERN NATIONAL MONUMENT

There is a shivery fascination about a great cave. Montana has one that in size and beauty of ornamentation is a fitting rival of the Mammoth Cave of Kentucky. Near Lime Spur Station, on the Northern Pacific Railroad, about half way between Bozeman and Butte, will be found the Lewis and Clark Cavern, discovered only a few years ago. Although only partially explored, the approaches have been improved and trips laid out for visitors.

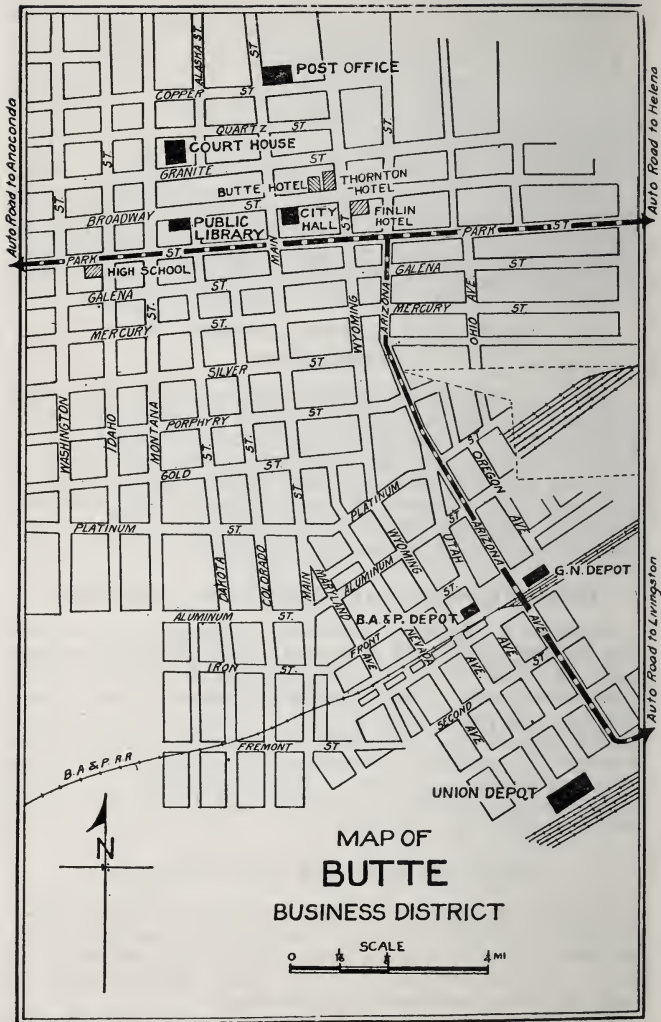

PREHISTORIC INHABITANTS OF MONTANA

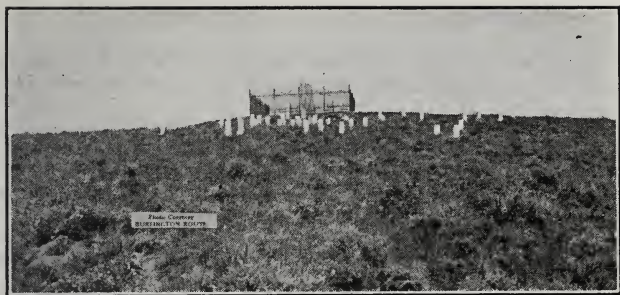

Montana is prolific in remains of both man and animal. The Indian inhabitants of ages ago left numerous painted rocks, mounds of stones and graves of their dead. Here also there dwelt in very remote prehistoric times strange animals and giant reptiles whose bones have been found safely preserved in clay and rock. Many an eastern university has enriched its museum with skeletons of Montana's prehistoric monsters. This state offers a rich field for research to the anthropologist, the ethnologist and the archaeologist.

POPULAR HOT SPRINGS RESORTS

The state is liberally supplied by nature with hot mineral springs of many kinds. They are popular resorts for seekers after health, rest and recreation. The following list gives the principal ones of the state, where hotels and bathing accommodations are provided:

Alhambra Hot Springs, Jefferson County, near Helena.
Barkels Hot Springs, Madison County, at Silver Star.

Custer's Last Stand. Brave Men Buried Where They Fell

Big Hole Hot Springs, Beaverhead County, at Jackson.
 Boulder Hot Springs, Jefferson County, near Boulder.
 Broadwater Natatorium, Lewis and Clark County, near
 Helena.

Camas Hot Springs, Sanders County, near Plains.
 Chico, Park County, near Yellowstone Park.

Elkhorn Hot Springs, Beaverhead County, near Dillon.
 Gregson Hot Springs, Silver Bow County, near Butte.

Hunter's Hot Springs, Park County, near Livingston.

Lo Lo Hot Springs, Missoula County, near Missoula.

Medicine Rock Hot Springs, Ravalli County, near Como.

Norris Hot Springs, Madison County, at Norris.

Pipestone Hot Springs, Jefferson County, near Butte.

Potosi Hot Springs, Madison County, near Pony.

Pullers Hot Springs, Madison County, near Alder.

Sleeping Child Hot Springs, near Missoula.

White Sulphur Springs, Meagher County, at White Sul-
 phur Springs.

Zeigler Hot Springs, Beaverhead County, near Apex.

HERE FELL CUSTER

On the top of a barren hill beside the Little Horn River, two miles south of the Crow Agency, stands a simple monument that bears the above inscription. Among our military heroes there was none with more dash and reckless courage than Major General Custer. With his long, waving yellow hair, he was the popular hero of his time. When, on July 25th, 1876, with a force of 260 officers and men, he went to his death in a reckless charge against 4,500 Cheyenne and Sioux Indians, a thrill of horror went through the nation. The Custer battlefield is now a national cemetery.

INTERESTING FACTS ABOUT MONTANA

Montana was first explored by the Lewis and Clark expedition in 1804. It was organized as a territory in 1864 and admitted as a state in 1889.

The total land surface is 145,201 square miles. The width north and south is 275 miles, the average length 535 miles. The state is well watered, being the source of the Missouri, Yellowstone, Clark Fork of the Columbia and many other large streams.

Helena is the state capital. The population, according to the census of 1920, is 547,593. The state flower is the Bitter Root.

It is one of the largest states of the Union, exceeded in size only by Texas and California. The western portion is crossed by the Rocky Mountains, the divide of the continent that separates the drainage of the Atlantic from the Pacific. Parallel to the Continental Divide and separated by wide and fertile valleys are other great mountain ranges whose peaks often extend far up above timber line into the realm of eternal snow.

Eastern Montana has a climate of greater extremes, being colder in winter and warmer in summer than the districts farther west. This is a rolling plain country and therefore more subject to wind.

A feature common to all parts of the state is the large number of sunny days, both in summer and in winter.

AUTOMOBILE HIGHWAYS OF MONTANA

There are three fine automobile highways entering the state from the east: the Yellowstone Trail, the Red Trail and the Roosevelt National Highway. From the south comes the Custer Battlefield National Highway.

The automobile roads of Montana are an evolution from a long time back and more closely allied with the early history of the state than one would imagine. First the wild game made their trails across the lowest divides and mountain passes. Following them came the Indian and the hunter. Then the prospector with his burro followed the same beaten track. Later these trails were widened to accommodate the prairie schooner, the stage coach and the ox team. Now they have been widened still more, leveled up and made passable for man's best mechanical friend, the automobile.

Good passable auto roads will be found between all cities, towns and agricultural districts.

Counties which have been subdivided since the 1920 census was taken, have populations given at the time of the census.

CLASON'S COMMERCIAL INDEX OF MONTANA CITIES AND TOWNS

27

EXPLANATION

POPULATION—In the column at the left of the name of the town, under the abbreviation "Pop.," are figures to denote the population.

COUNTIES—Following the name of the town is the name of the county in which it is located.

ELEVATIONS—Below the word "Elevation" are figures indicating the elevation of the town above sea level.

KEY—The letter and figures in the right hand column under the word "Key" refer respectively to the letters on the top and bottom of the map in the back, and the figures on each side of it; thus indicating the location of the town on the map.

RESOURCES—A brief description gives the industries and resources of the more important towns.

CLASON'S TABLE OF SHORTEST RAILROAD DISTANCES BETWEEN MONTANA TOWNS

CLASON'S TABLE OF RAILROAD DISTANCES BETWEEN MONTANA TOWNS
To find the distance between two towns, find the name of one at the side of the chart and the other at the top; where the columns opposite these names cross will be found the most direct railroad distance in miles.
